

2 28/8/25

Task 3:1 DML Commands using clauses operators and functions in Queries

Aim:

To implement of DML Commands using clauses, operators and functions in queries

Data manipulation Language (DML):

The data manipulation Language (DML) is used to retrieve, insert and modify database information. These commands will be used by all database users during the routine operation of the database

1. INSERT
2. UPDATE
3. DELETE

INSERT INTO:

This is used to add records into a relation

Syntax:

```
INSERT INTO <table_name> (<field 1, field 2... field N>)  
VALUES (<data 1, data 2, ... data N>);
```

Example:

SQL:

```
INSERT INTO patients VALUES (111, 'Asim',  
'Cardiology', 'Male');
```

| Patient ID | Patient Name | Department | Gender |
|------------|--------------|------------|--------|
| 111 | Asim | Cardiology | Male |

UPDATE-SET-WHERE :

This is used to update the content of a record in a relation

Syntax :

UPDATE table_name SET field1 = data WHERE condition;

Example :

SQL :

UPDATE Patients SET PatientName = 'Kumar' WHERE PatientID = 111;

Table after UPDATE :

| Patient ID | Patient Name | Department | Gender |
|------------|--------------|------------|--------|
| 111 | Kumar | Cardiology | Male |

DELETE FROM :

This is used to delete all records of a relation but it retains the structure

Syntax :

SQL :

DELETE FROM table_name;

Example :

SQL :

DELETE FROM Appointments;

Appointments table after DELETE :

| Appointment ID | Patient ID | Doctor ID | Appointment Name | Duration |
|----------------|------------|-----------|------------------|----------|
| | | | | |

DELETE-FROM-WHERE :

This is used to delete specific records from a relation

Syntax :

SQL :

DELETE FROM table_name WHERE condition;

Example :

SQL :

DELETE FROM Doctors WHERE DoctorID = 202;

Doctors Table after DELETE:

| Doctor ID | Doctor Name | Department | Fees |
|-----------|-------------|-------------|------|
| 201 | Dr. Sharma | Cardiology | 1000 |
| 203 | Dr. Ahmed | Neurology | 900 |
| 204 | Dr. Rajesh | Orthopedic | 500 |
| 205 | Dr. Neha | Dermatology | 800 |

TRUNCATE:

This removes all data permanently but keeps the table structure.

Syntax:

SQL:

TRUNCATE TABLE <table_name>;

Example:

SQL:

TRUNCATE TABLE Patients;

Patients Table after TRUNCATE:

| Patient ID | Patient Name | Department | Gender |
|------------|--------------|------------|--------|
| | | | |

Sample queries and output:

1. Retrieve patient names ending with letter 'n' and patient no between 111 and 115

Query:

SQL:

```
SELECT PatientName, Department, Gender  
FROM Patients  
WHERE PatientName LIKE 'x.n' AND PatientID  
BETWEEN 111 AND 115;
```

| PatientName | Department | Gender |
|-------------|-------------|--------|
| Arun | Cardiology | Male |
| Karan | Orthopedics | Male |
| Rohan | Dermatology | Male |

2. dist doctors where Consultation fees between 700 and 800.

query:

SQL:

SELECT * FROM doctors WHERE fees BETWEEN 700 AND 800.

| Doctor ID | Doctor Name | Department Name | Fees |
|-----------|-------------|-----------------|------|
| 202 | Dr. Priya | Pediatrics | 700 |
| 205 | Dr. Neha | Dermatology | 800 |

3. Find the record with minimum appointment duration

query:

SQL:

SELECT Min(duration) FROM appointments;

Min(duration)

20

4. Find appointment with date = '2023-02-07'

query:

SQL:

SELECT * FROM appointments WHERE AppointmentDate = '2023-02-07'

| Appointment ID | Patient ID | Doctor ID | Appointment Date | Duration |
|----------------|------------|-----------|------------------|----------|
| 302 | 112 | 203 | 2023-02-07 | 45 |
| 303 | 113 | 204 | 2023-02-09 | 20 |
| 304 | 114 | 202 | 2023-02-10 | 60 |
| 305 | 115 | 205 | 2023-02-12 | 25 |

5. list distinct patient IDs

Query:

SQL:

```
SELECT DISTINCT patient ID FROM patients;
```

| Patient ID |
|------------|
| 111 |
| 112 |
| 113 |
| 114 |
| 115 |

6. Combine patient IDs from Patients and Appointment (UNION)

Query:

SQL:

```
SELECT PatientID FROM Patients  
UNION  
SELECT Patient ID FROM Appointments;
```

| Patient ID |
|------------|
| 111 |
| 112 |
| 113 |
| 114 |
| 115 |

7. Group Patients based on gender and department

Query:

SQL:

```
SELECT Department, Gender, COUNT (*) AS  
Total Patients  
FROM Patients
```

GROUP BY Department, Gender;

| Department | Gender | Total Patients |
|-------------|--------|----------------|
| Cardiology | Male | 1 |
| Neurology | Female | 1 |
| Orthopedics | Male | 1 |
| Pediatrics | Female | 1 |
| Dermatology | Male | 1 |

8. Find doctors and their department details using GROUP BY and ORDER BY

Query:

Savi:

```
SELECT DoctorName, Department, COUNT(*) AS Count
FROM Doctor
GROUP BY DoctorName, Department
ORDER BY DoctorName;
```

| DoctorName | Department | Count |
|------------|-------------|-------|
| Dr. Ahmed | Neurology | 1 |
| Dr. Neha | Dermatology | 1 |
| Dr. Priya | Pediatrics | 1 |
| Dr. Rajesh | Orthopedics | 1 |
| Dr. Sharma | Cardiology | 1 |

| VEL TECH - CSE | |

| RECORD (5) | 1 |
| TOTAL (20) | 15 |
| | 0 |

25/3/2

Result:

Thus the implementation of DML Commands using clauses, operators and functions in queries executed successfully.

25/8/25

TASK: 3.2 Aggregate function (mult Row operations)

Aim:

To implement Aggregate functions

Procedure:

1. Create a table named Students
2. Insert Sample record
3. Write queries using aggregate functions
4. observe and record the output.

EXAMPLE TABLE: Patients

| Patient ID | Patient Name | Department | Bill Amount |
|------------|--------------|-------------|-------------|
| 101 | Poon | Cardiology | 2000 |
| 102 | Sneha | Neurology | 3500 |
| 103 | Karan | Orthopedics | 1500 |
| 104 | Meena | Pediatrics | 4000 |
| 105 | Rohan | Dermatology | |

COMMANDS WITH EXPLANATION:

1) Count the total number of patient

query:

```
SELECT COUNT(*) AS Total - Patients  
FROM Patients;
```

Output:

| Total - Patients |
|------------------|
| 5 |

2) Find the highest bill amount

query:

```
SELECT MAX(BILLAMOUNT) AS Highest - Bill  
FROM Patients;
```

Output:

| Highest - Bill |
|----------------|
| 4000 |

3. Find the average bill amount of patients

Query:

```
SELECT AVG (Bill Amount) AS Average_Bill  
FROM Patients;
```

Output:

| Average_Bill |
|--------------|
| 2700 |

4. Find the minimum bill amount among patients in Neurology department

Query:

```
SELECT MIN (Bill Amount) AS Min_Neuro_Bill
```

Output:

| Min_Neuro_Bill |
|----------------|
| 3500 |

5. Find the total bill amount by each department

Query:

```
SELECT department, SUM (Bill Amount) AS Total_Bill  
FROM Patients  
GROUP BY department;
```

Output:

| Department | Total_Bill |
|-------------|------------|
| Cardiology | 2000 |
| Neurology | 3500 |
| Orthopedics | 1500 |
| Pneumatics | 4000 |
| Permatology | |

6. Find the average bill per department ordered by average descending

Query:

```
SELECT department, AVG (Bill Amount) AS Avg_Bill  
FROM Patients  
GROUP BY department  
ORDER BY Avg_Bill DESC;
```

output:

| Department | Aver_Bill |
|-------------|-----------|
| Pediatrics | 4000 |
| Neurology | 3500 |
| Dermatology | 2500 |
| Cardiology | 2000 |
| Orthopedics | 1500 |

| VEL TECH - CSE | |
|-------------------------|--------------|
| EX NO. | 32 |
| PERFORMANCE (5) | 5 |
| RESULT AND ANALYSIS (5) | 5 |
| VIVA VOCE (5) | 5 |
| RECORD (5) | 5 |
| TOTAL (20) | 20 |
| SIGN WITH DATE | M 20/8/25 |

Result: The implementation of aggregate functions are executed successfully.
